BREAST PHANTOM

Enhancing breast imaging and AI with unparalleled realism

phantomx

OPTIMAL IMAGING PERFORMANCE

Designed to simulate healthy breast tissue, masses, and microcalcifications, this phantom provides an ideal tool for optimizing breast imaging systems and AI for precise diagnosis.

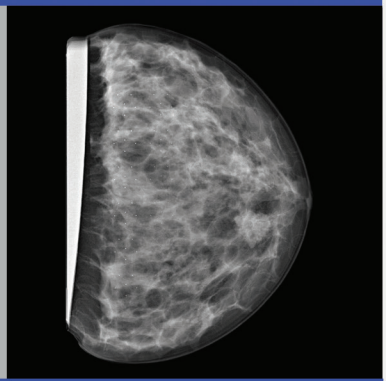

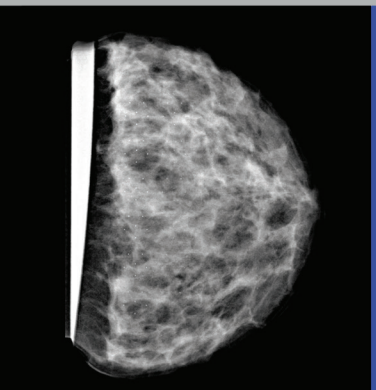

MONITOR AI PERFORMANCE

Standardized testing of AI for implementation, updates and daily quality control.

TRAINING AND EDUCATION

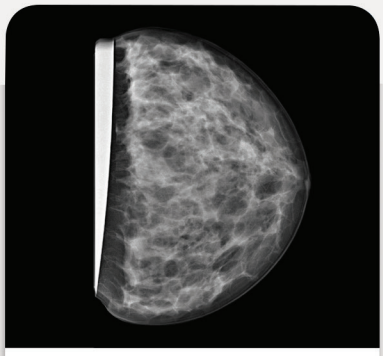

Hands-on experience for medical staff to provide the best imaging care to patients.

Realistic Microcalcification Simulation for Mammography and Tomosynthesis

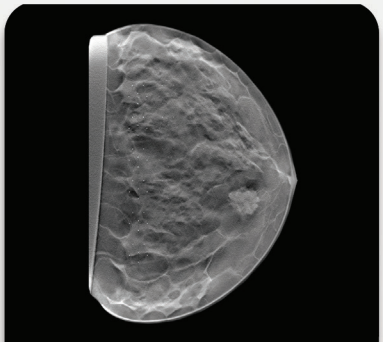

The calcification template enables realistic simulation of microcalcifications (50 µm - 390 µm) to enhance image quality and diagnostic software, including AI tools.

REALISTIC TISSUE SIMULATION

MODULAR PHANTOM DESIGN

IDEAL FOR TOMOSYNTHESIS
